ICHTIOFAUNA DORZECZA RZEKI WIEPRZÓWKI

ICHTHYOFAUNA OF THE WIEPRZÓWKA RIVER DRAINAGE BASIN

Zakład Biologii Wód Polskiej Akademii Nauk,
31-016 Kraków, ul. Sławkowska 17

ABSTRACT

The ichthyofauna of the Wieprzówka River drainage basin, the left tributary of the Skawa River, was studied. The investigations were carried out in years: 1968, 1973-1974 and 1985-1987 in the same stations. Fish species and their river environment were characterized.

Harmful effect of industrial sewage and communal waste waters flowing from the city of Andrychów on the presence, number and health status of fishes in the lower and middle fragments of Wieprzówka River (below the outlet of sewage canal) was observed.
